

# AZV / RZV Product Update

Hydro Tek Distributor Marketing Bulletin

April 2011

The AZV/RZV mobile wash water filtration series has been updated. In addition to a sleek new look and simpler bag change design, the specifications have been improved to offer more bang for your buck.

## Design Improvements:

- **Low profile design** lowers the vacuum for better protection against the elements and makes the controls easier to access.
- Pressure gauge is now protected in the stainless steel enclosure to prevent damage.
- Redesign of the Stainless Steel lid makes **changing bag filters much easier**.

*Simply lift the entire lid off of the AZV or RZV system and bring it down to ground level for easier maintenance.*

## Performance Upgrades:

- **NEW Open Air Flow System** results in 50% increase in water pick up (**up to 12 gpm**).
- Improved performance allows for **use with 100' of 2" vac hose**.
- **NEW Dual Bag** pre-filtration allows for up to **3 times longer** run time before changing.

*1<sup>st</sup> Mesh bag fits inside the second bag catching large debris; this prevents it from clogging the second bag.*

*2<sup>nd</sup> bag catches finer debris before it enters the settling tank.*

- **All AZV and RZV** systems are now equipped with a **pump out feature** for when water recycle is not needed and disposal into landscaping or sanitary sewer is available.

*Attach a garden hose to the quick connect fitting for pump out up to 100' away.*
