

Statement of Governmental Regulation Compliance

Hydro Tek Systems builds all of its Mobile Wash Skids, Pressure Steamers, and Portable Hot Water Pressure Washers to strict safety standards and compliance to UL1776. Most models are certified ETL/CSA listed and approved. All engine driven models are EPA (Environmental Protection Agency, US) and CARB (California Air Resources Board) approved for sale and use in all 50 states.

All Hydro Tek diesel fired models have an input capacity of 550,000 BTU per hour or less to be compliant to the SCAQMD (South Coast Air Quality Management District, CA) Rule 219 definition for burner emission compliance. "Power Pressure Washers and Hot Water or Steam Washers and Cleaners, that are equipped with a heater or burner that is designed to be fired on diesel fuel, has a rated maximum heat input capacity of 550,000 Btu per hour or less, is equipped with a non-resettable chronometer, and the maximum NOx emission output of the equipment is less than one pound per day and uses no more than 50 gallons of fuel per day."

Hydro Tek can install a second hour meter that monitors the burner run time primarily for California distributors or as needed elsewhere in the country. This satisfies the non-resettable chronometer requirement.

Hydro Tek Systems maintains ISO9001 certification through scrutinizing the processes that create and control the products and services we supply, and systematic control of activities to ensure the quality of the products that the needs and expectations of customers are met.

Hydro Tek also manufactures several water reclaim and recycle systems which allow customers to save water and become compliant with various federal, state, and local water pollution prevention requirements including the Clean Water Act.

Hydro Tek Systems is on the forefront of meeting environmental concerns and compliances with all of its models. Should you have any questions please ask your Regional Sales Manager for assistance.
